CORNER ROUNDING MACHINE

The Hardcover Case Corner Rounding Machine is connected to the hardcover case making machine. Finished hardcover cases are conveyed into the working area by a conveyor belt, where they are pressed and formed into rounded corners using air cylinders and a heated press. The finished cases are then delivered to a stacking table with counting. The rounded edges are smooth and well-finished, making it ideal for hardcover book covers.

Parameter	Specification
Machine Dimensions (L×W)	2600 × 1200 mm
Max Case Size	525 × 420 mm
Min Case Size	155 × 95 mm
Fastest Speed	60 m/min
Power	2 kW
Gas Demand	900 L/min @ 6 bar
Weight	800 kg
Rated Voltage	380 V
